

Please create a simple web interface that can search OMDB API for movies. You should be able to add and delete movies from a list.

You can use any technology you please, whether it is HTML, CSS and JavaScript or React or any CSS preprocessors. Feel free to design it however you like! Please see attached wireframe for basic outline, but feel free to do whatever you like.

The wireframe shows a web interface layout. At the top is a search bar with the placeholder text 'Search'. Below this are two main panels. The left panel, titled 'Search Results', contains two identical rows. Each row has a light gray box with the text 'Movie Name' and a black button labeled 'Add'. The right panel, titled 'Watchlist', contains one row with a light gray box labeled 'Movie Name' and a black button labeled 'Remove'.

Requirements

- Search OMDB and display the results (only movies, not TV shows) - should display the image and movie title at the very least
- Add a movie to your watchlist
- Delete a movie from your watchlist
- View your watchlist
- If a search result movie has already been added, disable its add button.

You can find access to a free API key for OMDB here <https://www.omdbapi.com/apikey.aspx> (make sure you select the FREE! Version)

Please send us the GitHub repo link and where you have deployed your code (GitHub pages, Netlify, Heroku)

Please reach out if you have any questions at all!
